Joint Technology Committee
FY27 IT Capital Request - IGOR Replacement

Colorado Department of Corrections
Andre Stancil, Executive Director

Department of Corrections Inspector General Offense Reporting System

(IGOR)

Tech Debt Priority

- This project is critical to the Department's ongoing technical debt remediation efforts and necessary to maintain critical data and processes.

- IGOR scored an 'F' letter grade on the OIT Assets Scoring Matrix

- System failure is a very real concern with IGOR

- Completion of this project is necessary to decommission the Department's archaic Informix data systems, which are long past expected life expectancy.

Current System Deficiencies

- **Inadequate Reporting**

- **Unsupported Legacy Technology**

- **Security and Integration Risks**

- **Lack of OIT support**

The Solution - Modern, Off-the-Shelf Investigative Suite

- Replace IGOR with a COTS (Commercial Off-the-Shelf) solution aligns with OIT's enterprise strategy and modern law enforcement standards. Benefits of the new system include:

    - Integrated report writing functionality

    - Searchable database

    - Accountability and security

    - Victims' Right Act (VRA) compliance

    - Interoperability and integration opportunities
